

**Authors:** Shyam Basnet (Southasia Institute of Advanced Studies (SIAS)), Prajal Pradhan (University of Gottingen), Sushant Acharya (Southasia Institute of Advanced Studies (SIAS)), Rajendra Uprety (AgriGreen Nepal), Pashupati Pokhrel (Ministry of Industry, Agriculture and Cooperative, Koshi provincial government, Nepal), Dil Khatri (Southasia Institute of Advanced Studies (SIAS); Swedish University of Agricultural Sciences), Ram Basnet (Freelance Consultant).

Pathway Assumptions					
		A) CURRENT TRENDS	B) NATIONAL COMMITMENTS	C) GLOBAL SUSTAINABILITY	JUSTIFICATION
1. Macroeconomics	1.1) GDP per capita	<b>SSP2</b> , assuming a medium rate of convergence of economic growth (approximately 2.5% increase in GDP per capita), projects GDP per capita to 2282 USD/capita/year in 2050 [1018 USD/capita/year in 2020].	<b>SSP1</b> , 3516 USD2000/cap /year in 2050. The Agriculture Development Strategy (ADS) forecasts 2242 USD/cap/year in 2030 (ADB-NEP, 2013).	<b>SSP1</b> , 3516 USD2000/cap /year in 2050. This sustainability scenario anticipates a rapid convergence of economic growth.	
	1.2) Population	<b>UN high growth</b> , projected rapid increase of 41.3 million in 2050 [29.3 million in 2020]	<b>UN constant fertility</b> , 33.3 million in 2030 and 38.7 million in 2050. This is the closest to the ADS forecast of 35.1 million in 2030.	<b>UN constant fertility</b> , 33.3 million in 2030 and 38.7 million in 2050.	
	1.3) Inflation	Prices are assumed to change due to inflation based on the <b>average annual Consumer Price Index (CPI)</b> fluctuation from 2000 to 2020.	Prices are assumed to change due to inflation based on the <b>average annual Consumer Price Index (CPI)</b> fluctuation from 2000 to 2020.	Prices are assumed to change due to inflation based on the <b>average annual Consumer Price Index (CPI)</b> fluctuation from 2000 to 2020.	
	1.4) Inequalities	-	-	-	

<b>2. Land</b>	<b>2.1)</b> Constraints on agricultural expansion / deforestation	<b>Free expansion</b> of productive land under the total land boundary.	<b>Free expansion</b> of productive land under the total land boundary	<b>Free expansion</b> of productive land under the total land boundary
	<b>2.2)</b> Afforestation, and forest plantations targets	<b>No afforestation</b> scenario, with forestland remaining constant to 2020 levels (5973 k ha in 2050).	<b>Low afforestation</b> , with a new forest area of 20 k ha (5993 k ha in 2030 and 2050). The ADS anticipates a 30 k ha increase in forest area by 2030 compared to 2014. ADS is expected to cover 40% of terrestrial land by 2030 (ADB-NEP 2013).	<b>Moderate growth</b> , with 50 k ha more additional forestland than in 2014.
	<b>2.3)</b> Urban and settlements area	<b>UN high growth</b> in the urban population, with forecasts of 8.5 million in 2030 & 14.7 million in 2050 [6.2 million in 2020].	<b>UN constant fertility</b> , with an urban population of 8.4 million in 2030 and 13.8 million in 2050. The ADS assumed a 4% growth rate to the 2010 level.	<b>UN constant fertility</b> , with an urban population of 8.4 million in 2030 and 13.8 million in 2050.
	<b>2.4)</b> Protected areas (PA)	<b>No Expansion</b> , of the current 23% PA of the country's total area by 2030 [3327.8 k ha in 2020, 2030 and 2050].	<b>PA Expansion to 25%</b> of total area by 2030 [3707 k ha in 2030 and in 2050]. The national government has no specific goals, but it is committed to expanding PAs (ADB-NEP, 2013).	<b>PA Expansion to 30%</b> of total land area by 2030 [4441 k ha in 2030 and in 2050]. A new Aichi target of 30% of terrestrial land by 2030 is being discussed. We expected a moderate growth to achieve this aim by 2050.

<b>3. Productivity and management</b>	<b>3.1) Crop productivity for the key crops</b>	<b>BAU</b> scenario, with the productivity of major crops as: - <i>Paddy</i> : 4.1 t/ha in 2050 [3.8 t/ha in 2020], - <i>Maize</i> : 3.2 t/ha in 2050 [2.9 t/ha in 2020], - <i>Wheat</i> : 3.5 t/ha in 2050 [3.1 t/ha in 2020]. - <i>Millet</i> : 1.2 t/ha in 2050 [1.2 t/ha 2020]. - <i>Barley</i> : 3.9 t/ha in 2050 [1.3 t/ha in 2020].	<b>Low growth</b> scenario, as ADS forecasts a 2% annual growth rate in cereal production until 2030, which corresponds to the following for the major crops: - <i>Paddy</i> : 4.2 t/ha in 2050, - <i>Maize</i> : 3.5 t/ha in 2050, - <i>Wheat</i> : 3.4 t/ha in 2050, - <i>Millet</i> : 1.2 t/ha in 2050, - <i>Barley</i> : 2.0 t/ha in 2050.	<b>High growth</b> scenario, with substantial yield potentials as follows: - <i>Paddy</i> : 5.2 t/ha in 2050, - <i>Maize</i> : 3.9 t/ha in 2050, - <i>Wheat</i> : 5.0 t/ha in 2050, - <i>Millet</i> : 1.2 t/ha in 2050, - <i>Barley</i> : 5.3 t/ha in 2050.
	<b>3.2) Cropland under agroecological practices</b>	<b>No change</b> from 2010 in the adoption of agro-ecological practices, such as diversified farming (61.5%), conservation tillage (95%), embedded natural farming (25%) and organic farming (0.23%).	<b>No change</b> from 2010, in the adoption of agro-ecological practices.	<b>No change</b> from 2010 level, in the adoption of agro-ecological practices.
	<b>3.3) Livestock productivity for the key livestock products</b>	<b>BAU</b> Growth scenario with: - <i>Milk</i> 2.5 t/LU in 2050 [2.1 t/LU in 2020], - <i>Pork</i> 0.11 t/LU in 2050 [0.09 t/LU in 2020], - <i>Beef</i> 0.03 t/LU in 2050 [0.04 t/head in 2020], - <i>Chicken meat</i> 0.37 t/LU in 2050 [0.33 t/LU in 2010], - <i>Mutton</i> 0.05 t/LU in 2050	<b>High Growth</b> scenario with: - <i>Milk</i> 2.7 t/LU in 2050, - <i>Pork</i> 0.12 t/LU in 2050, - <i>Beef</i> 0.05 t/LU in 2050, - <i>Chicken meat</i> 0.41 t/LU in 2050, - <i>Mutton</i> 0.06 t/LU in 2050, - <i>Eggs</i> 1.04 t/LU in 2050.  According to ADB-NEP (2013), milk yield was 900 litres/lactation in 2010, and	<b>High Growth</b> scenario with: - <i>Milk</i> 2.7 t/LU in 2050, - <i>Pork</i> 0.12 t/LU in 2050, - <i>Beef</i> 0.05 t/LU in 2050, - <i>Chicken meat</i> 0.41 t/LU in 2050, - <i>Mutton</i> 0.06 t/LU in 2050, - <i>Eggs</i> 1.04 t/LU in 2050.

		[0.05 t/LU in 2020], - <i>Eggs</i> 0.08 t/head in 2050 [0.08 t/head in 2020].	under the ADS plan, it is expected to increase to 2000 litres/lactation in 2030.	
	<b>3.4)</b> Pasture stocking rate	<b>BAU</b> growth scenario with 6.3 LU/ha cattle stocking density in 2050 [4.3 LU/ha in 2020].	<b>BAU</b> growth scenario with 6.3 LU/ha cattle stocking density in 2050.	<b>High growth</b> scenario with 7.0 LU/ha cattle stocking density in 2050.
	<b>3.5)</b> Forest management	-	-	-
<b>4. Trade</b>	<b>4.1)</b> Share of consumption which is imported for key imported products (%)	<b>Stable</b> imports at 2020 levels until 2050, with import shares in consumption such as: - <i>Paddy</i> : 23%, - <i>Maize</i> : 20%, - <i>Wheat</i> : 16%, - <i>Millet</i> : 6%, and - <i>Barley</i> : 35%.	<b>Reduce</b> import shares in food consumption by half by 2050, if the levels in 2020 are more than 5%; otherwise, reduce them to zero, as: - <i>Paddy</i> : 12.5%, - <i>Maize</i> : 10%, - <i>Wheat</i> : 8%, - <i>Millet</i> : 3%, and - <i>Barley</i> : 17.5%.  The ADS plans to limit import to 4% per year (598 million dollars in 2010 and 1310 million dollars in 2030) and maintain 0-5% trade surplus in food grains (ADB-NEP, 2013).	<b>Reduce</b> import shares in food consumption by half by 2050 from its level in 2020 as: - <i>Paddy</i> : 12%, - <i>Maize</i> : 10%, - <i>Wheat</i> : 8%, - <i>Millet</i> : 3%, and - <i>Barley</i> : 17.5%.
	<b>4.2)</b> Evolution of exports for key exported products	<b>Stable</b> exports up to the maximum historical exports from 2000 to 2020, as follows:	<b>Increase</b> exports by 1.3 times of the largest historical exports between	<b>Increase</b> exports by 1.5 times the maximum
